PowerPoint Presentation Outline: Research Methodology with Example

Below is a detailed outline for a PowerPoint presentation (PPT) on Research Methodology. I've structured it as a series of slides, including content, bullet points, and suggestions for visuals. Since I can't generate or upload an actual PPT file, you can easily copy this into PowerPoint (or Google Slides) to create it yourself. Each slide includes notes on layout, and I've integrated relevant images from web searches to enhance visuals— these will render inline where appropriate.

The presentation uses a sample research example: "The Influence of Artificial Intelligence Integration on Job Satisfaction Among Tech Professionals" (a "good research" topic I've created based on your request, drawing from current trends in 2025). This example illustrates key elements like title, variables, problem statement, framework, theory, and hypothesis.

I've based the methodology structure on standard steps from reliable sources. Use a clean template (e.g., blue tones for tech theme), with headings in bold, bullets for clarity, and images centered or to the side. ~~scribbr.com~~ ~~paperpal.com~~

Slide 1: Title Slide

- **Title:** Research Methodology: Concepts and Application
- **Subtitle:** With Example - The Influence of AI on Job Satisfaction in Tech
- **Presenter:** [Your Name]
- **Date:** November 16, 2025
- **Layout Suggestion:** Center-aligned text, add a subtle background image of a flowchart.

Slide 2: What is Research Methodology?

- Definition: Research methodology refers to the systematic approach to solving a research problem, including the design, methods, and techniques for data collection and analysis. paperpal.com
- Key Components:
  - Research design (e.g., quantitative, qualitative, mixed)
  - Data collection methods (surveys, interviews, observations)
  - Data analysis techniques (statistical tools, thematic analysis)
  - Ethical considerations
- Why it matters: Ensures reliability, validity, and reproducibility of findings. libguides.usc.edu
- **Layout Suggestion:** Bullet list on left, diagram on right.

Research Methodology Diagram . | Download Scientific Diagram

Slide 3: Steps in Research Methodology

- Step 1: Identify the research problem or topic. nhcc.edu
- Step 2: Conduct literature review and define objectives.
- Step 3: Formulate hypothesis and variables.
- Step 4: Choose research design and methods.
- Step 5: Collect data.
- Step 6: Analyze data.
- Step 7: Interpret results and report findings. scribbr.com
- **Layout Suggestion:** Numbered list or flowchart. Add animation for steps.

Slide 4: Example Research Title

- **Research Title:** The Influence of Artificial Intelligence Integration on Job Satisfaction Among Tech Professionals
- Rationale: In 2025, AI adoption in tech is accelerating, making this a timely topic to explore workforce impacts.
- Objectives: To examine how AI tools affect daily work and employee well-being.
- **Layout Suggestion:** Large bold title, short explanation below.

Slide 5: Problem Statement/Definition

- **Problem Statement:** With the rapid integration of AI in the tech industry post-2020,

professionals face challenges like skill obsolescence, increased workload automation, and job insecurity, potentially leading to decreased job satisfaction. This study defines the problem as the gap in understanding how varying levels of AI use influence satisfaction metrics, aiming to provide insights for better HR policies. sjsu.edu

- Significance: Addresses real-world issues in a evolving job market.
- **Layout Suggestion:** Paragraph text with key phrases bolded.

Slide 6: Determining Variables

- **Independent Variable (IV):** Level of AI integration (e.g., low: minimal AI use; medium: assistive tools; high: full automation). This is manipulated or observed.
- **Dependent Variable (DV):** Job satisfaction (measured via scales like the Job Satisfaction Survey, on a 1-5 Likert scale). This is the outcome affected by the IV.
- **Control Variables:** Age, experience, company size (to isolate effects).
- **Moderator Variables:** Work-life balance (may influence the IV-DV relationship).
- **Layout Suggestion:** Table for clarity:

Variable Type	Description	Example Measurement
Independent	Level of AI integration	Survey on AI usage frequency
Dependent	Job satisfaction	Likert scale questionnaire
Control	Age, experience	Demographic data

15 Independent and Dependent Variable Examples (2025)

Slide 7: Framework of the Study

- **Conceptual Framework :** Visual model showing how AI integration (IV) leads to changes in job satisfaction (DV), mediated by factors like skill relevance and workload.
- Based on: Input-Process-Output model, where inputs (AI tools) affect processes (work tasks) and outputs (satisfaction).
- **Layout Suggestion:** Diagram or arrows connecting boxes (e.g., AI Integration → Mediators → Job Satisfaction).

Slide 8: Theory Supporting the Study

- **Underlying Theory:** Job Demands-Resources (JD-R) Theory – posits that job demands (e.g., AI-induced changes) can strain employees, while resources (e.g., training) buffer effects on satisfaction. waywithwords.net
- Application: AI increases demands (learning curves) but provides resources (efficiency), influencing satisfaction.
- **Layout Suggestion:** Quote the theory briefly, with bullet explanations.

Slide 9: Hypothesis

- **Hypothesis (H1):** Higher levels of AI integration in tech workflows will negatively correlate with job satisfaction among professionals, due to perceived job threats.
- **Null Hypothesis (H0):** There is no significant relationship between AI integration and job satisfaction.
- Testing: Via regression analysis or t-tests.
- **Layout Suggestion:** Bold H1 and H0, with explanation.

Slide 10: Research Design and Methods (Example Application)

- Design: Mixed-methods – Quantitative surveys for measurable data, qualitative interviews for insights.
- Sample: 200 tech professionals via online surveys.
- Data Collection: Questionnaires and semi-structured interviews. scribbr.com
- Analysis: SPSS for stats, thematic coding for qualitative.
- **Layout Suggestion:** Bullet list.

Slide 11: Ethical Considerations and Limitations

- Ethics: Informed consent, anonymity, IRB approval.

- Limitations: Self-reported bias, generalizability to non-tech sectors.
- **Layout Suggestion:** Bullets.

Slide 12: Conclusion and Q&A

- Summary: Research methodology provides a structured path from problem to insights, as shown in our AI example.
- Key Takeaway: Always align methodology with your research goals for valid results.
- **Layout Suggestion:** Bullet recap, end with "Questions?"

Illustration of the flow diagram on research methodology ...

This PPT has 12 slides for brevity but can be expanded. Total estimated time: 15-20

minutes. To create the actual file, paste into PowerPoint, add transitions, and download the images from the provided URLs if needed. If you want me to adjust the example topic or add more details, let me know!

↳ Add sample data analysis

↳ Compare with qualitative methods

↳ Make slides more concise
