03 BI in Project Planning

04 Conclusion

01

Introduction

Failing to plan is planning to fail

In modern projects, planning without data is a risk.

Introduction

Project planning defines:

Scope

Risks

Schedule

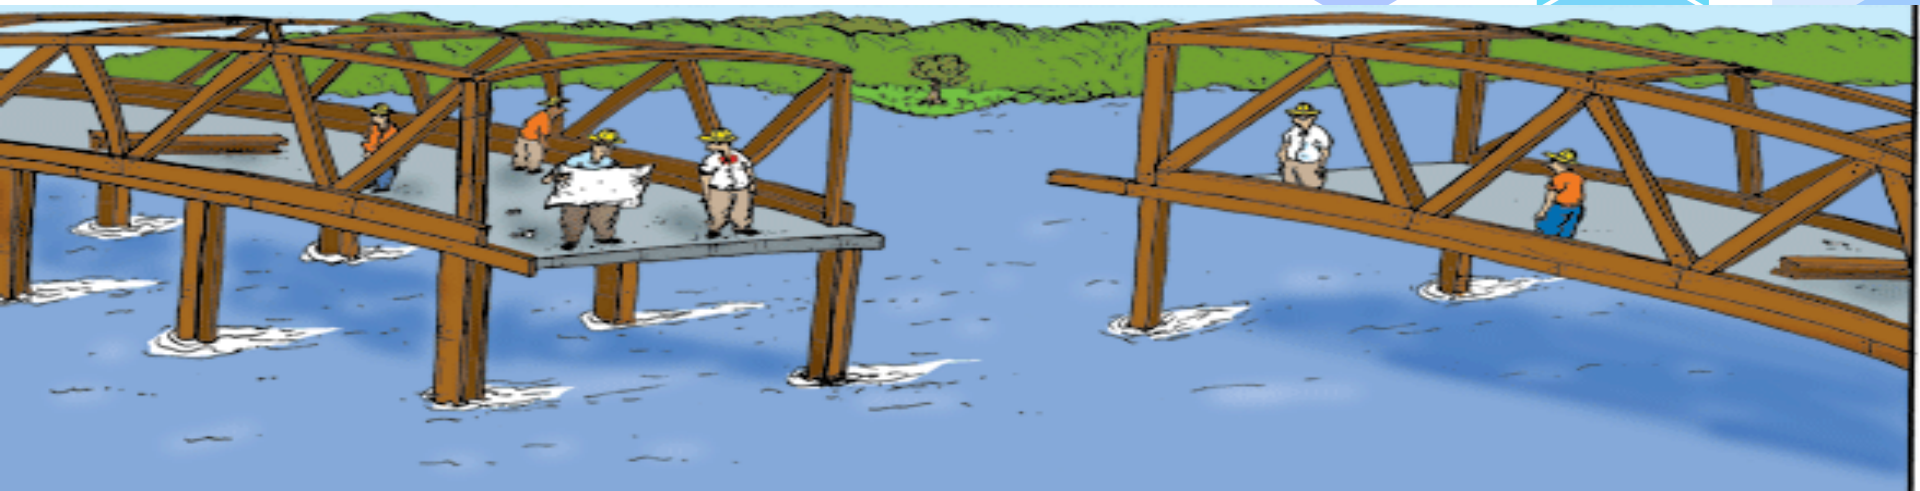

Cost

Resources

- Effective planning provides a roadmap for project execution
- Poor planning often results in:
  - Delays
  - Budget overruns
  - Scope creep
- Many project failures originate at the planning stage.

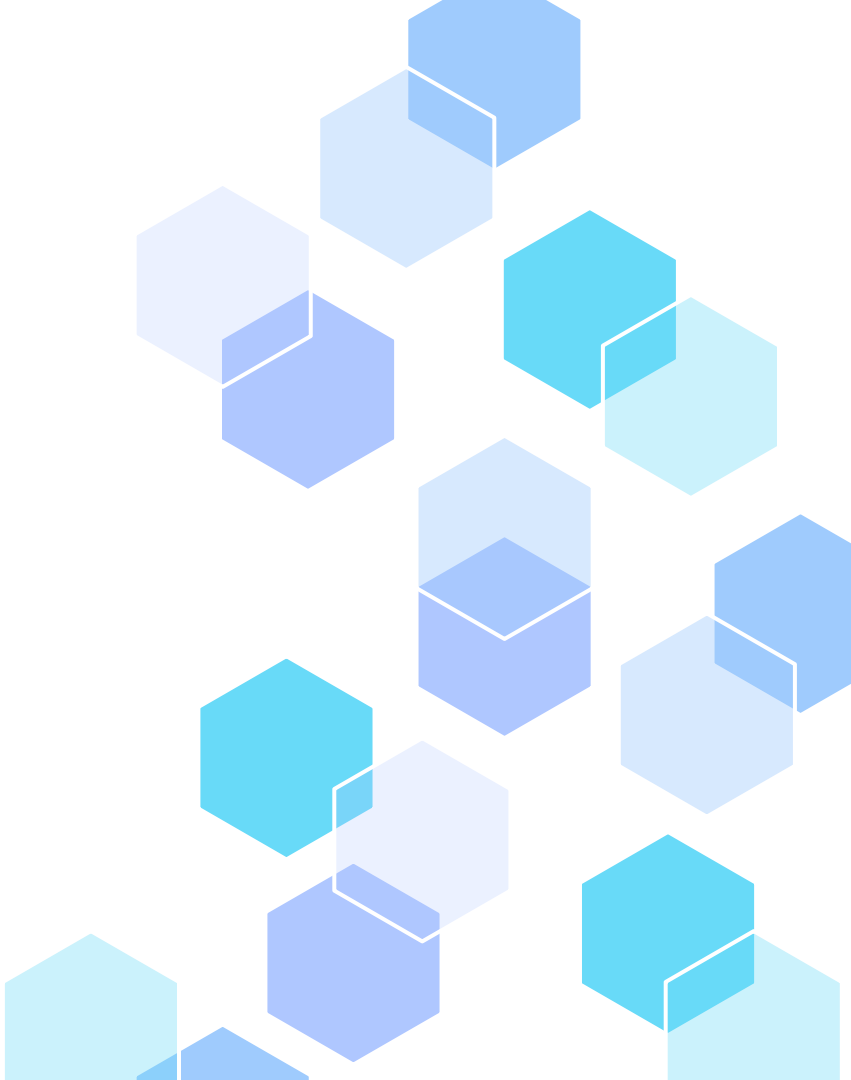

Need for Data-Driven Planning

- Modern projects generate large volumes of data
- Planning decisions require:
  - Accuracy
  - Forecasting
  - Risk Visibility
- Manual and intuition-based planning is no longer sufficient
- Organizations now rely on data to improve planning outcomes

This growing need for accurate and data-driven planning leads us to the role of Business Intelligence.

02

What is Business Intelligence?

A PICTURE
IS WORTH A
THOUSAND
WORDS

What is Business Intelligence (BI)

- Business Intelligence (BI) refers to:
  - Collecting Data
  - Processing Data
  - Analyzing Data
  - Presenting Analysis
- It transforms raw data into meaningful information
- BI helps organizations make informed decisions

BI is not just reporting, it's about turning data into insights that support better decisions.

Key Components of BI

Data Sources

- Project Data
- Financial Data
- Resouce Data

Data Processing

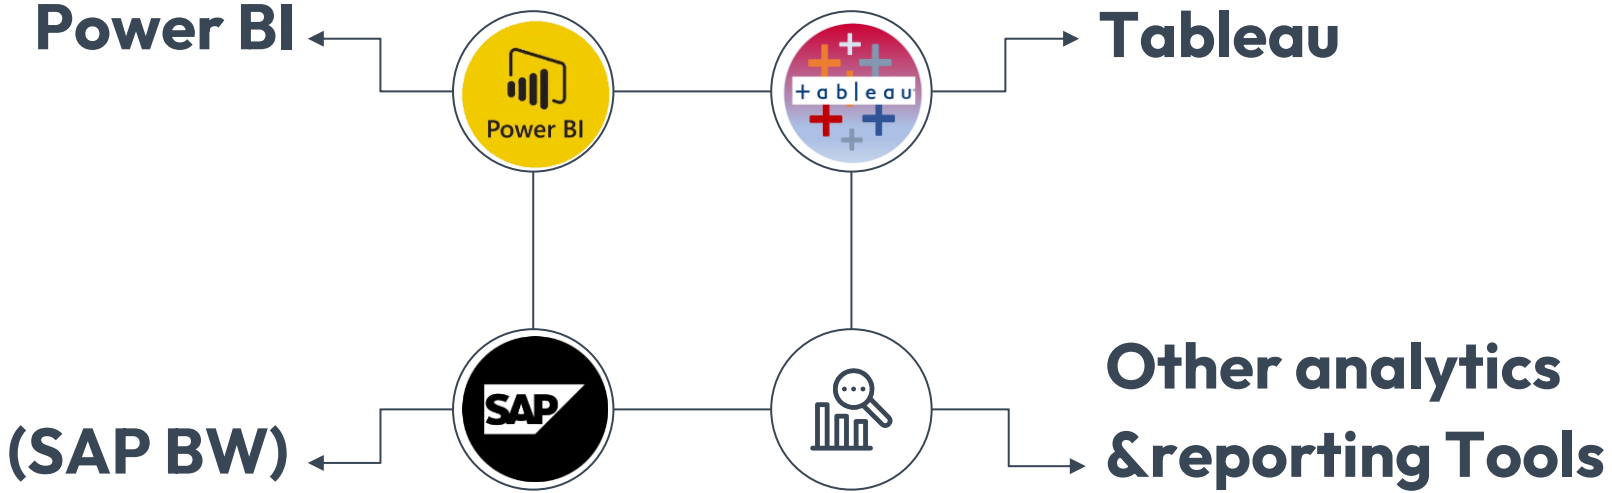

- Data Cleaning
- Integeration
- Transformation

Reporting & Visualization

- Dashboard
- KPI
- Reports

Business Intelligence Tools Used in Industry

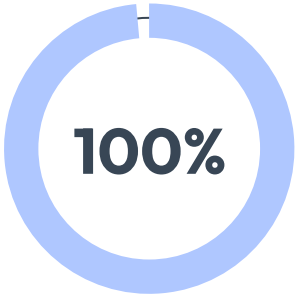

Quick Activity

Here's the customer satisfaction data for our products across regions. Take a moment to analyze it — which region has the happiest customers, and which regions need improvement?

Region	Product	Customer ID	Satisfaction	Feedback Notes	Date	Misc Info
North	Laptops	C101	Yes	Good	01/01/2026	N/A
South	Laptops	C102	No	Late delivery	01/01/2026	-
West	Laptops	C103	Yes	Great product	02/01/2026	Random123
North	Laptops	C104	Yes	Very satisfied	03/01/2026	Garbage
South	Laptops	C105	No	Damaged packaging	03/01/2026	N/A
West	Laptops	C106	Yes	Satisfied	04/01/2026	Some notes
North	Laptops	C107	Yes	Excellent service	05/01/2026	N/A
South	Laptops	C108	No	Product not working	06/01/2026	Random456
West	Laptops	C109	Yes	Very happy	07/01/2026	Extra data
South	Laptops	C110	Yes	Issue resolved	08/01/2026	-
West	Laptops	C111	No	Delivery delay	08/01/2026	N/A
North	Laptops	C112	Yes	Love it	09/01/2026	Trash data
West	Laptops	C113	Yes	Fine	10/01/2026	N/A

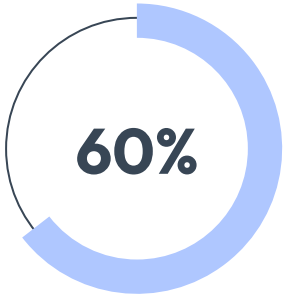

From Messy Data to Actionable Insights

Satisfaction %

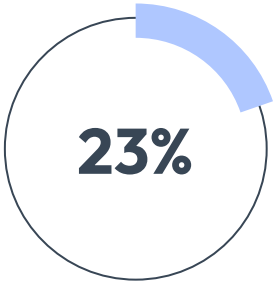

North

Maintain current strategy, premium promotion

West

Moderate satisfaction, upsell, monitor quality

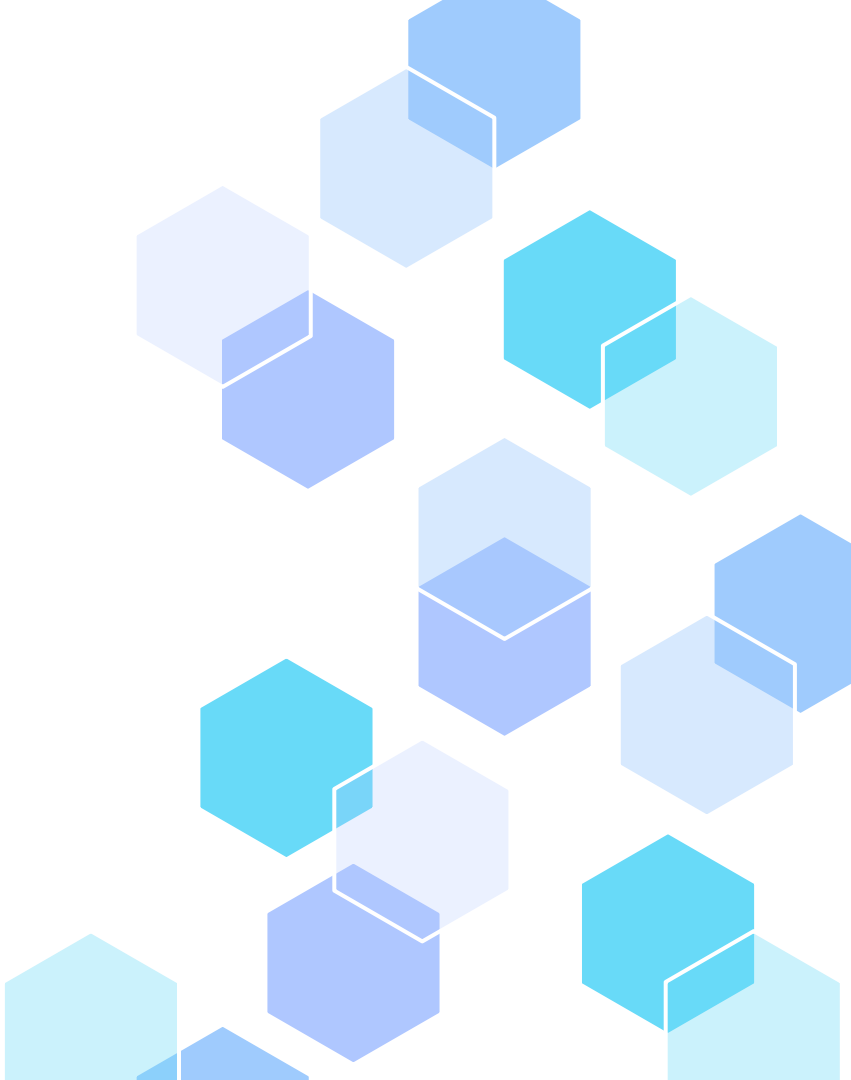

South

Investigate complaints, improve service, offer promotions

03

BI in Project Planning

How BI Supports Project Planning?

- Planning areas supported by BI:
  - **Schedule:** timeline forecasting, critical path visibility
  - **Cost/Budget:** accurate estimates, monitor variance
  - **Resources:** optimal allocation, avoid idle/overloaded resources
  - **Scope:** clear deliverables, reduce scope creep
  - **Risks:** early identification, monitoring KPIs

Instead of treating planning areas separately, BI allows project managers to manage all areas together using insights and dashboards.

Practical Application of BI in Planning:

From Data to Decision-Making

- Historical data analysis for evidence-based planning
- Dashboards for real-time tracking (timeline, budget, risks)
- Forecasting and trend analysis
- Quick identification of potential bottlenecks

BI transforms raw project data into actionable insights, making planning faster, more accurate, and less risky.

Benefits of BI in Project Planning

Key Benefits

- Improved accuracy and reliability of plans
- Faster decision-making
- Enhanced visibility and control
- Reduced risks and surprises during development
- Better communication with stakeholders
- Strong planning with BI naturally leads to smoother and more controlled project development

In short, BI doesn't replace project managers, it empowers them to plan smarter.

04

Conclusion

Conclusion

- Business Intelligence enhances accuracy, visibility, and control in project planning.
- Data-driven planning improves scope, schedule, cost, resource, and risk management.
- Effective planning reduces risks, cost overruns, and delays, leading to smoother project execution.
- BI empowers project managers to make informed, proactive decisions.
- Strong planning naturally ensures controlled and successful development outcomes.

“Without data, you’re just another person with an opinion.”

—W. Edwards Deming
