✅ Lab Title:

Deploying a Public NGINX Image from Docker Hub using Amazon ECS

□ Lab Objectives:

By the end of this lab, you will be able to:

- Set up ECS using Fargate.
- Create a Task Definition to use the NGINX Docker image.
- Deploy an ECS service to run the container.
- Access the NGINX web server via a public URL.

□ Prerequisites:

Before starting the lab, ensure you have the following:

Required:

- ✅ An **AWS account** with access to **ECS**, **EC2**, and **IAM**.
- ✅ **IAM permissions** to create and manage ECS, EC2, and related networking components.
- ✅ Familiarity with basic AWS networking (VPC, Subnets, Security Groups).
- ✅ Docker Hub access (no login required for public images like `nginx`).
